

Bug Report — Pretty Good AI Voice Agent

9 distinct issues across 10 test calls — High: 3, Medium: 4, Low: 2.

Surfaced by a Claude Opus 4.8 judge over the call transcripts, then de-duplicated into distinct issues. Each is grounded in a verbatim agent quote with a call reference and timestamp. The full raw per-call findings are in *findings_raw.json*.

1. Identity verification bypassed: agent accepts mismatched date of birth and proceeds with PHI/medication actions

- **Severity:** High (*recurs across 8 calls*)
- **Category:** identity_verification
- **Call:** transcript-07.txt at 00:27
- **Details:** Across nearly every call, the caller's DOB did not match records, yet the agent explicitly acknowledged the mismatch and proceeded to disclose appointment details, reschedule/cancel, and process medication refills. In transcript-07 this even applied to a controlled-substance (opioid) refill. The agent literally says 'for demo purposes' so this is plausibly intended demo behavior; however, in real deployment this is a critical authentication failure that could expose another person's PHI or enable fraudulent prescription/appointment actions.
- **Evidence:** "The birthday doesn't match our records, but for demo purposes, I'll accept it. How can I help you today?"
- **Also in:** transcript-02.txt, transcript-03.txt, transcript-04.txt, transcript-06.txt, transcript-08.txt, transcript-09.txt, transcript-10.txt

2. Transfer to live representative dead-ends into a test line, stranding the caller

- **Severity:** High (*recurs across 2 calls*)
- **Category:** escalation_gap
- **Call:** transcript-01.txt at [02:00]
- **Details:** When the agent escalates to a human (to book a new patient in transcript-01, and to answer hours/location/parking/insurance questions in transcript-05), the transfer immediately terminates at a 'Pretty Good AI test line' goodbye message. The caller is left unbooked, unanswered, and disconnected. In transcript-05 this also caused total failure of the caller's core multi-part informational intent. Likely a demo placeholder endpoint, but in production this fully fails the caller and breaks the escalation path.
- **Evidence:** "Connecting you to a representative. Please wait. Hello. You've reached the Pretty Good AI test line. Goodbye."
- **Also in:** transcript-05.txt

4. Hallucinated/unverifiable facts presented as confirmed (availability, providers, fees, pharmacy locations)

- **Severity:** Medium (*recurs across 6 calls*)

- **Category:** hallucination
- **Call:** transcript-07.txt at 02:26
- **Details:** The agent repeatedly asserts specific facts it cannot verify in a demo environment: concrete appointment openings, named providers and exact times, cancellation/no-show fee policy ('There is no cancellation or no show fee'), turnaround expectations, and specific pharmacy locations/addresses. In a controlled-substance refill context (transcript-07/08) fabricated pharmacy details risk misrouting prescriptions. These are presented as confirmed fact rather than hedged.
- **Evidence:** "There are a few CVS locations in Springfield, Virginia, but none are listed on Main Street. Here are some options nearby. CVS and Target at Springfield Mall CVS. At Old Keene Mill Road. CVS at Springfield Plaza, CVS at Burke Lake Road, Do any of these sound like the one you use?"
- **Also in:** transcript-01.txt, transcript-03.txt, transcript-06.txt, transcript-08.txt, transcript-09.txt

5. Verification performed before learning caller intent (and applied to new patients with no record)

- **Severity:** Medium (*recurs across 3 calls*)
- **Category:** identity_verification
- **Call:** transcript-05.txt at 00:20
- **Details:** The agent front-loads extensive identity verification (DOB, name spelling, phone lookup) before discovering what the caller wants — unnecessary for simple information requests and leading to frustrating dead-ends (transcript-05). In transcript-01 it 'confirmed' a name/DOB as if matching a record for a brand-new patient who has no record on file. Intent should be gathered first and verification scaled to the request.
- **Evidence:** "Please provide your date of birth."
- **Also in:** transcript-01.txt

6. Dead air / latency forcing caller to prompt 'Hello?' before agent responds

- **Severity:** Medium (*recurs across 2 calls*)
- **Category:** turn_taking_latency
- **Call:** transcript-02.txt at 01:02
- **Details:** After the caller's request, there was a noticeable silence long enough that the patient had to say 'Hello?' before the agent responded. Awkward pacing/latency undermines the conversational experience and may cause callers to repeat themselves or hang up.
- **Evidence:** "I see you have an appointment on Monday, July sixth at nine fifteen AM with Kelly Noble at Nashville two two o Athens Way. Is this the appointment you want to reschedule?"
- **Also in:** transcript-08.txt

7. ASR mishears medication and pharmacy names during read-back

- **Severity:** Medium
- **Category:** transcription_asr
- **Call:** transcript-04.txt at 00:47
- **Details:** The agent misheard 'meloxicam' as 'icam' when confirming the refill, and repeatedly heard 'CVS' as 'CDS' when discussing the pharmacy. Errors in medication names and pharmacy

identifiers during a refill workflow risk incorrect or misrouted prescriptions.

- **Evidence:** "Just to confirm, you need a refill for icam. Correct?"

8. Day-of-week discrepancy in surfaced appointment not clarified

- **Severity:** Low (*recurs across 2 calls*)
- **Category:** other
- **Call:** transcript-02.txt at 01:02
- **Details:** Callers expected a Thursday appointment but the agent surfaced a Monday (transcript-02) / Friday (transcript-08) appointment without acknowledging or reconciling the day mismatch, relying on the patient to catch it. Risks acting on the wrong appointment.
- **Evidence:** "I see you have an appointment on Monday, July sixth at nine fifteen AM with Kelly Noble at Nashville two two o Athens Way. Is this the appointment you want to reschedule?"
- **Also in:** transcript-08.txt

9. Contradictory or presupposed availability offered to caller

- **Severity:** Low (*recurs across 2 calls*)
- **Category:** other
- **Call:** transcript-06.txt at [01:51]
- **Details:** The agent contradicted itself on earliest availability (first 'as soon as tomorrow,' then repeatedly stating Friday was soonest) in transcript-06, and preemptively offered only Friday slots before the caller chose a day in transcript-09. This confuses callers about real availability and presupposes their preference.
- **Evidence:** "We have several openings this week starting as soon as tomorrow, Would you prefer a morning or afternoon appointment?"
- **Also in:** transcript-09.txt
